SUMMARY

Software Developer at Games Global with a BSc in Computer Science (Data Science) from Stellenbosch University, now putting that foundation to work owning service development end-to-end - building .NET/C# game backends, a Blazor-based simulation management and testing website, and an AI-powered translation tool on AWS Bedrock that cut the team's localisation costs. I've mentored a developer through their first service build, and I'm always looking for the next problem worth solving.

PERSONAL INFORMATION

Age: 22 yrs **Gender:** Male **Nationality:** South African

EXPERIENCE

Software Developer Internship, Games Global

June 2024 - July 2024

- Collaborated with a talented team on interactive gameplay features, gaining valuable hands-on experience in game development

Graduate Software Developer, Games Global

Jan 2025 - May 2025

- Focused on service development while upskilling in AWS, C#, and .NET
- Responsibilities included developing backend services for multiple games and creating an in-house AWS cloud solution with an internal web platform for running game simulations
- Contributed to interactive gameplay features across team projects

Software Developer Level 1, Games Global

May 2025 - Present

- Own service development end-to-end across multiple games simultaneously; handle service-related bug fixes and contribute to game architecture improvements
- Built a Blazor-based simulation management website (hosted internally) for requesting, running, and signing off game simulations for release
- Onboarded and mentored a developer through building their first game service
- Additionally, developed automation tools to streamline internal processes and contributed to improving game architecture
- 2026: took sole ownership of all service development and expanded into client-side feature work across games
- Built an AI-powered translation tool on AWS Bedrock that automated and significantly cut the team's localisation costs

SKILLS

Languages: Java, C, Python, HTML, CSS, R, Delphi, C#, JavaScript, TypeScript, Dart, Svelte

Frameworks & Tools: .NET, Blazor, Flutter, React, PixiJS, Firebase, PostgreSQL, REST APIs, Docker, Git, NUnit, Postman

Cloud (AWS): API Gateway, Cognito, Step Functions, Lambda, S3, EC2, DynamoDB, Bedrock, SNS, SQS

Automation: n8n

Agile & Collaboration: Agile, Jira, Confluence, CI/CD

PROJECTS

Propagen Website - *Next.js 16, React 19, TypeScript, Tailwind CSS 4*

Marketing site with a pricing/comparison page, product showcase, and a multi-step lead-capture booking flow backed by a server-side form API.

Real Estate Website - *React 19, Vite 7, Tailwind CSS 4, Airtable, Vercel Functions*

Production real estate listings site built as a reusable client template; live Airtable data via a serverless API layer and rate limiting.

E-Spaza - Multi-Shop Ordering Platform - *React, TypeScript, GraphQL, TypeORM, PostgreSQL, Auth0*

Digitizes spaza shops: multi-shop ordering, camera-based barcode inventory scanning, and multi-stop route suggestion via the HERE Maps API.

InkLink - Collaborative Markdown Notes - *React, TypeScript, WebSockets*

Frontend work on a collaborative note-taking app: a live-rendered markdown editor, note sharing/permissions UI, and real-time updates as collaborators edit together.

Instagram Clone - *Dart, Flutter, Firebase*

Full social-app loop - auth, live feed, posting from camera/gallery, likes, comments, follow, and live user search - on a Firebase backend.

Gomoku AI Player - MPI-Parallel Minimax - *C, MPI*

Distributed minimax search agent with dynamic master/worker load balancing across MPI processes, connecting to a game server over a socket to play live matches.

DFA-Based Image Compression - *Java*

Lossless image compression representing an image as a deterministic finite automaton, based on Culik-Kari style automata compression.

Moving Maze - *Java, Swing*

4-player sliding-tile maze game where the board reshapes every turn, with shared game logic across console and GUI renderers.

Impasse - *Java, Swing*

Block-placement puzzle game with three independent board-state detectors and one-ply-ahead speculative move simulation.

Wedding Table Allocation - *HTML, CSS, JavaScript*

Zero-backend guest table lookup for a real wedding, fetching guest data straight from a GitHub-hosted JSON file.

ACCOMPLISHMENTS & AWARDS

Professional - Games Global, 2024-Present

- Progressed from Software Engineering Intern to Software Developer Level 1 in under a year, taking on sole ownership of all service development along the way
- Mentored a developer through building their first game service
- Completed the AWS Solutions Architect Associate course (Udemy)

Academic

- Runner-up, Top Undergraduate BSc Computer Science Student, Stellenbosch University
- Robertson High School Dux Learners Award
- Top 10 Achievers Award - Western Cape
- Student Council Member: Deputy Head Boy
- Honorary academic awards - 5 years
- 1st Position in Grade - Gr 8-12
- SA Mathematics Olympiad
- Member of Golden Key International Society
- Grade 12 (Senior Certificate) average: 94.57%

Sport

- Hockey: U/19 A First Team, Hockey Umpire course completed, qualified for Tour team to New Zealand
- Athletics: Captain of Team
- Swimming: School First Team, Captain of Team

EDUCATION

BSc Computer Science, focal area Data Science - Stellenbosch University

2022 - 2024 · Consistent passes with distinction across coursework

Senior Certificate - Robertson High School

2017 - 2021 · 94% average
